

Project:

*Multi-Specialty Medical Office Building & Ambulatory Surgery Center
Cincinnati, Ohio*

Prompted by the need to house their growing practice, Beacon Orthopaedics & Sports Medicine selected Irscher, Inc. to design and construct an Orthopaedic Institute. Beacon Orthopaedics secured various other physicians partnerships within the community by developing the Institute, adding several ancillary components to the facility.

During the initial stages of the project, Irscher, Inc. assisted Beacon Orthopaedics & Sports Medicine in selecting an appropriate site, as well as assist in plan development with various tenant/partners, allowing for a comprehensive design and construction planning process. One of the most unique aspects of the Institute is the 28,000-sq. ft. baseball training and performance enhancement center. Also included is a 10,000-sq. ft. ambulatory surgery center, MRI imaging center, a therapy/rehabilitation center for an independent chiropractor.

Completed in 2003, Beacon Orthopaedics & Sports Medicine is a convenient, patient-friendly medical center serving the Cincinnati and surrounding Tri-State areas. The 66,000-sq. ft. facility is geared to meet not only the orthopaedic needs of the area, but hopes to develop into a world renowned center for amateur and professional athletes.
