

Project:

*ENT Surgery Center
Columbus, Ohio*

To expand outpatient medical care in their community, Bethel Real Estate, Ltd. selected Irscher, Inc. as their design/builder to construct a new ambulatory surgery center in Columbus, Ohio. A combined venture of a number of associated physicians, the resulting 15,000-sq. ft. surgery center would allow the newly formed entity to better control costs and enhance availability associated with scheduling surgical procedures.

The Irscher/Marasco Team was chosen to apply their extensive medical construction expertise to the project, which gave the physicians confidence in the project's success. In addition, the Irscher/Marasco Team worked closely with the physicians' managing partner, ASC Group, to develop the building program, as well as design, project cost control, scheduling and construction.

The completed Ohio Center for ENT Surgery facility consists of six operating rooms, patient prep and phased recovery areas. The facility has been cited in numerous media as an example of particularly innovative and patient-friendly design.
