

Project:

*Urgent Care Center
Fort Wayne, Indiana*

Seeking to merge two urgent care centers into one centralized location, RediMed selected Irscher, Inc. to design, build and leaseback a new clinic to efficiently serve the Fort Wayne community.

Challenged by unusually wet winter conditions, Irscher, Inc. broke ground and began work on a tight schedule. Although weather constraints caused considerable difficulties, Irscher, Inc. pushed forward and completed the project within schedule and budget.

As a result, RediMed was able to open their new facility earlier than projected, and eagerly began serving patients in northwest Fort Wayne. The new 5,000-sq. ft. clinic boasts an efficient practice layout including x-ray, two procedure rooms, a laboratory, two drug screening rooms and six exam rooms.
